

Parker Macomber

303-746-4947 | parker.macomber@ucdenver.edu | Aurora, CO

SUMMARY OF QUALIFICATIONS

- Interest in database management and creation to help maintain a more organized and suitable future.
- Programming experience with a specialty in: SQL, Python, C, C++, and Assembly Language
- Tools and Framework used include: MySQL, PHPmyadmin, MicroSoft Office Suite (Word, Excel, Powerpoint, & etc...), Google Drive, Tableau, and Docker
- Strong analytical skills to fetch data through databases to understand outcomes of situations
- Experience using UNIX to manage files using UNIX commands within the command line
- Effective at collaborating and communication when it comes to project related work
- General understanding of AI and how to properly use it among tasks to produce efficient outcomes

EDUCATION

Bachelor of Arts, Computer Science, GPA 3.4

Dec. 2025

University of Colorado Denver, Denver, CO

- Deans list - Spring 2023, Spring 2025, and Fall 2025.

CERTIFICATION

Google Data Analytics Certification

Jan. 2026 - May 2026

- Analysis data using Excel spreadsheets, SQL, and Python to create user friendly CSV files.
- Visualize trends using Tableau and Excel spreadsheets to share data with stakeholders.

DATABASE / ANALYSIS PROJECTS

UFC Database, Database course - SQL, MySQL

Jan. 2024 - May 2024

- Built an Ultimate fighting championship database using 3-schema, ER/EER diagrams, and the use of normalization.
- Finalized the project with writing relational algebra and SQL to retrieve queries within the database built in PHPmyadmin (MySQL).

Covid-19 Data Analysis - SQL, Big Query, Tableau

Mar. 2026

- Analysed data given from the worldwide Covid-19 public dataset in Big Query, using SQL to harvest data to find information on countries with the highest number of cases, highest death rate, cases per 100 thousand residents per country. All to determine what country was impacted the most within the Covid-19 pandemic.
- Illustrated the outcomes in Tableau to make the data more user friendly and easier to read. Used heat maps, bar charts, and line graphs to illustrate the significance of the data.

Bike Share Data Analysis - Excel, Powerpoint

Apr. 2026

- Analysed data from a google public dataset on a bike share company to determine how to get unsubscribed patrons to become members. The data used for the analysis was given rider data from every month in the year prior.
- Completed the analysis by using excel to create pivot tables and advanced functions to compare what month, day of the week had the highest number of unsubscribed riders, and the difference between ride times on members and non members. All of which was developed into graphs on excel, and presented in a powerpoint slide.

WORK EXPERIENCE

Crew Member – PapaMurphy's, Centennial, CO

May. 2021 - Current

- Worked as a Crew member where we communicated and worked as a team to keep everything running smoothly.
- Experience with training new employees, where I was able to train them on certain things to meet corporate standards.
