

Covid-19 Data Analysis (2020-22)

...

By: Parker Macomber

Overview

Problem: What Countries have the largest impact from Covid-19 during the pandemic (2020 - 2022)

Source of Data: Public dataset from Bigquery:
`bigquery-public-data.covid19_open_data`

Analysis:

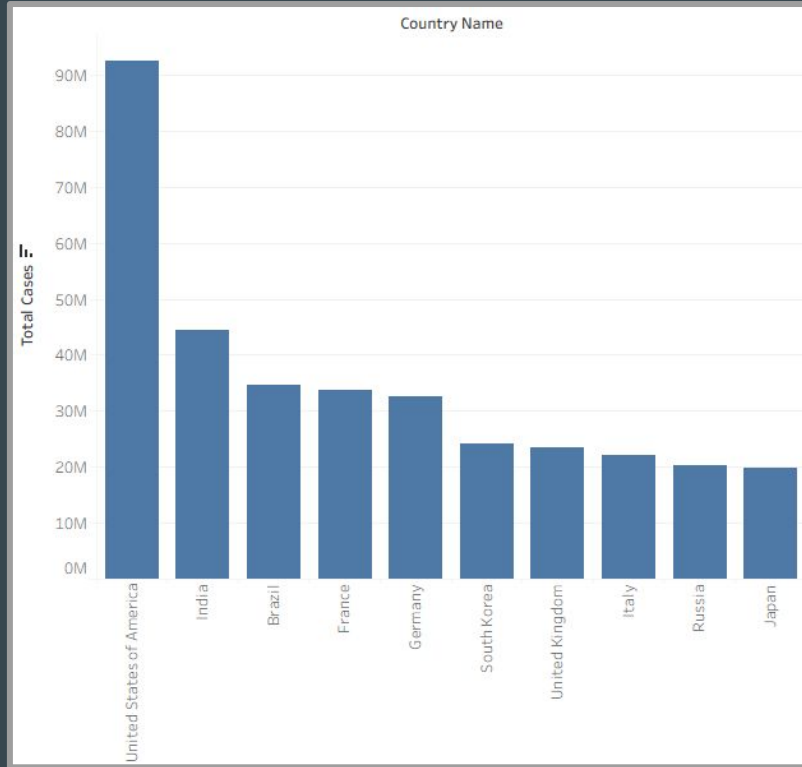

- Top 100 countries with the most Covid-19 Cases
- Top 10 countries with the most Covid-19 Cases
- Top 10 Countries with the highest Death Rate
- Total number of cases and death rates over time

Top 100 Countries with top Covid-19 Cases

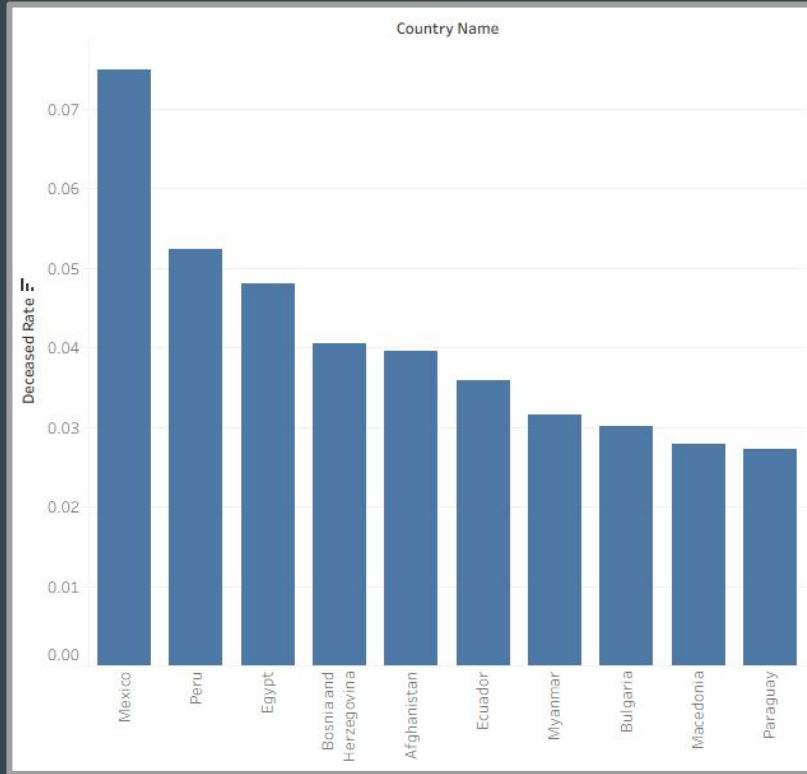

- In this heat map, it shows the top 100 countries with the highest number of Covid-19 cases
- General highest number of cases comes from first world countries.
- Notability the US has the highest cases.

Top Ten Countries with Covid-19 Cases

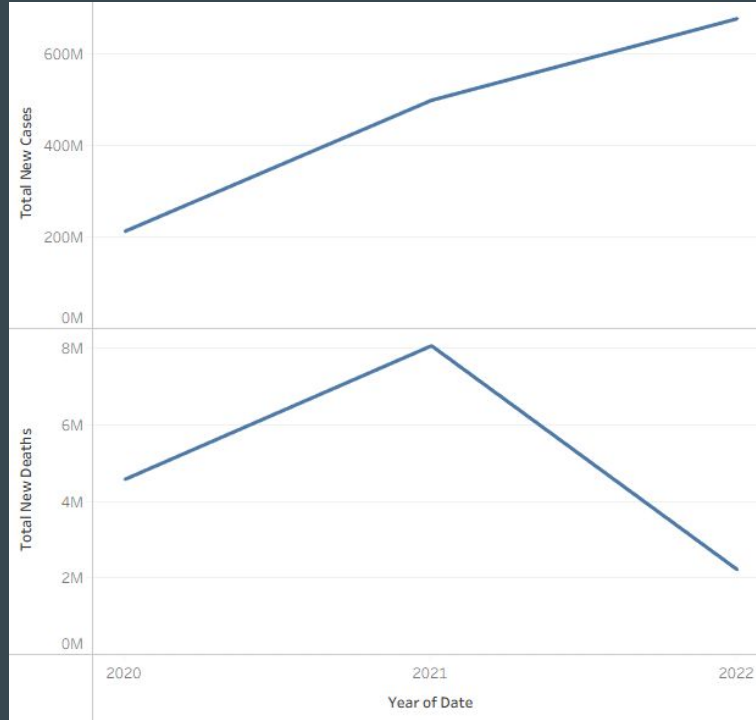

- Top ten countries with highest covid-19 cases
- The US more than doubles India's total cases
- Notably most countries on the list are Developed countries

Top Ten Countries with the Highest Death Rate

- Death rate in this case is categorized as $(\text{cases deceased} / \text{cases confirmed})$
- Notably countries categorized as developing have had the biggest impact from the death rate

Total New Cases vs. Total Deaths

- Total cases are still on the rise, but have begun to level out
- Number of death cases overtime have dropped
- In 2021 something had slowed down both the number of cases and deaths in the world
- This impact was due to the vaccinations that were received all around the world

Results

Largest number of cases:

- Developed countries
- Countries with larger populations
- US had the highest recorded number of cases

Death rate impact:

- Developing countries
- Countries with medium sized populations
- Mexico has the highest death rate

Timeline of cases and deaths:

- Over the pandemic timeline deaths have slowed down and cases have leveled out

Conclusion:

- Developing countries have had the highest impact of covid-19 as their death rates are the highest and may be impacted on not having easy access to healthcare
- Countries that have had the highest amount of cases may not be the ones that are the most impacted
- Towards the end of the pandemic the impact has lowered, which means countries have taken control of the disease.
